HR	Social affairs & Health	Science, Tech. & Culture	Prices & Consumption	Survey
IT	Research services	Food Industries	External Economy	Method, analysis & Data Science
		Data Collection and SBR	Economic models	

Historical landmarks/milestones

1801: First Danish census

1849: First Danish constitution and Parliament

1850: Statistical Bureau established

1966: Present law on SD adopted

1976: First register-based population census

2001: First 'StatBank Denmark' on the internet free of charge

2001: Online internet access to microdata for researchers

2018: Latest revision of the Law on Statistics Denmark

The law on Statistics Denmark

- a. The purpose and obligation of SD (Art. 1)
- b. The governance structure of SD (Art. 2)
 - a. the National Statistician, incl. for appointment and dismissal
 - b. the Board and it's appointment and composition
 - c. the Minister and government appropriations
- c. Compliance with EU legislation (Art. 3.a)
- d. Digital reporting (Art. 3.b)
- e. Publicly produced statistics and Official Statistics – i.e. coordination of the National Statistical System (Art. 4)
- f. Access to administrative data (Art. 6)**
- g. Data confidentiality (Art. 7)
- h. Mandatory data collection from businesses (Art. 8-12)
- i. Legal basis for fining in case of refusal to provide data (Art. 13)

Tasks of Statistics Denmark

Shall:

- Develop and produce statistics;
- Provide statistical services for lawmaking and public administration;
- Manage or assist in the design and use of the registers of public authorities and institutions that can be used for statistical purposes;
- Co-ordinate the official statistics;
- Safeguard professional interests in the statistical domain in connection with public digitalisation initiatives;
- Represent Denmark in international fora.

Can:

- Produce statistical analyses;
- Assist committees and commissions;
- Collect and perform quality assurance of data for public authorities;
- Make de-identified data available for statistical analyses and scientific purposes;
- Carry out commercial and grant-financed activities.

Statistics Denmark's Strategy 2025

MISSION

“We are the national supplier of independent statistics **and data** for society”

VISION

“We are the preferred source of reliable knowledge on Danish society”

FIVE CORPORATE VALUES

“Trustworthiness, transparency, user focus, adaptability and **data accountability**”

NINE STRATEGIC OBJECTIVES

The strategy pin-points **three areas of strategic focus** with nine goals in total ...

STATISTICS

We provide new and improved statistics for the development of Danish society

DATA

We offer the most convenient and secure access to data on Danish society

ORGANISATION

We are a competent and efficient organisation enabling others to succeed

Added relevance

We will match the present-day needs of users – and for that reason, we will cover new areas of relevance to society, develop fast indicators and use new channels of communication.

One common entry point

We will create one common entry point to all data on society for researchers, analysts and authorities.

Closer cooperation

We will initiate and enter into more mutually beneficial partnerships and strengthen our relationship with stakeholders and users.

High quality

We will ensure that the quality of our statistics, communication and documentation is of the highest international standard.

New data sources

We will find new data sources, secure their interaction with existing data, and translate them into new knowledge of relevance to society.

New competences

We will develop and attract competent and dedicated employees and managers to turn our vision into reality.

Stronger development

We will set an ambitious and bold development agenda, experiment and test new opportunities whenever the potential to do better presents itself.

High data security

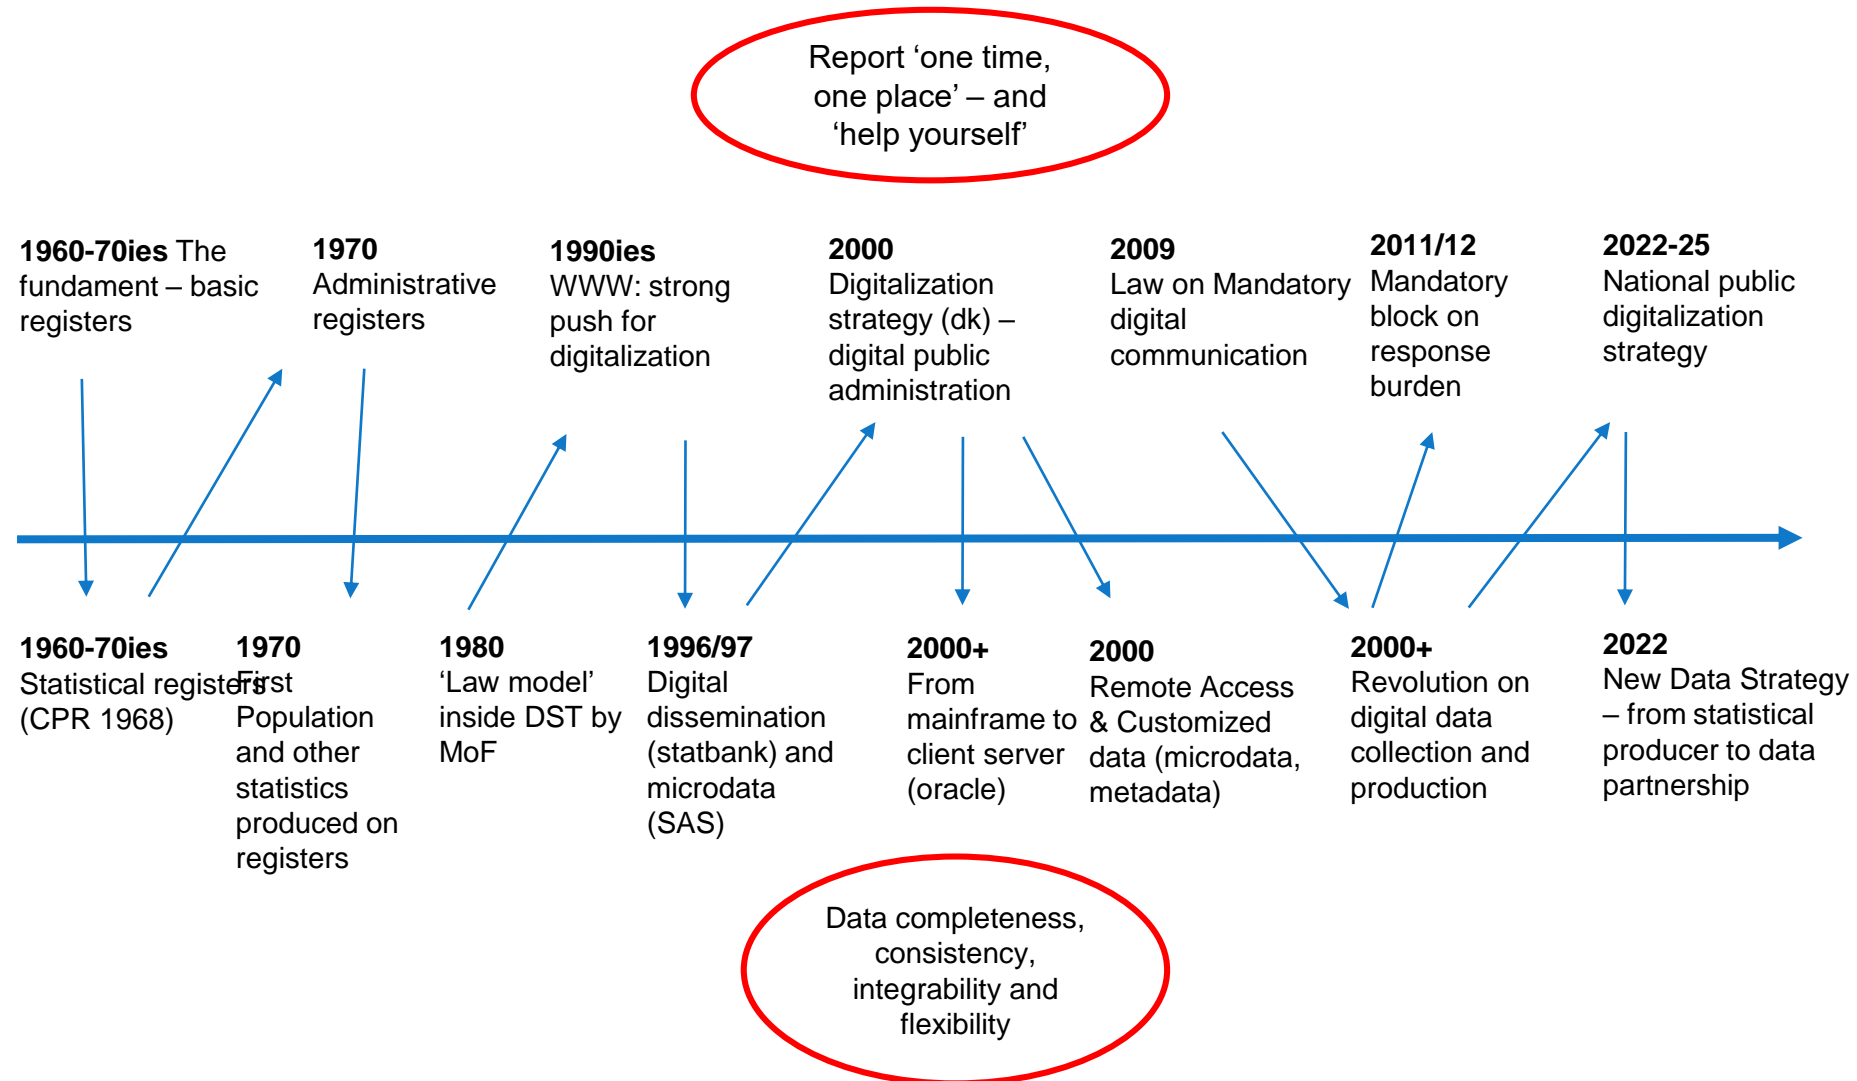

We are and will remain a leading, recognized and certified data environment, where security is always a primary consideration.

Increased efficiency

We will increase our efficiency using new technological options and work to ensure efficient use of our own resources as well as those of others.

The register based statistical system

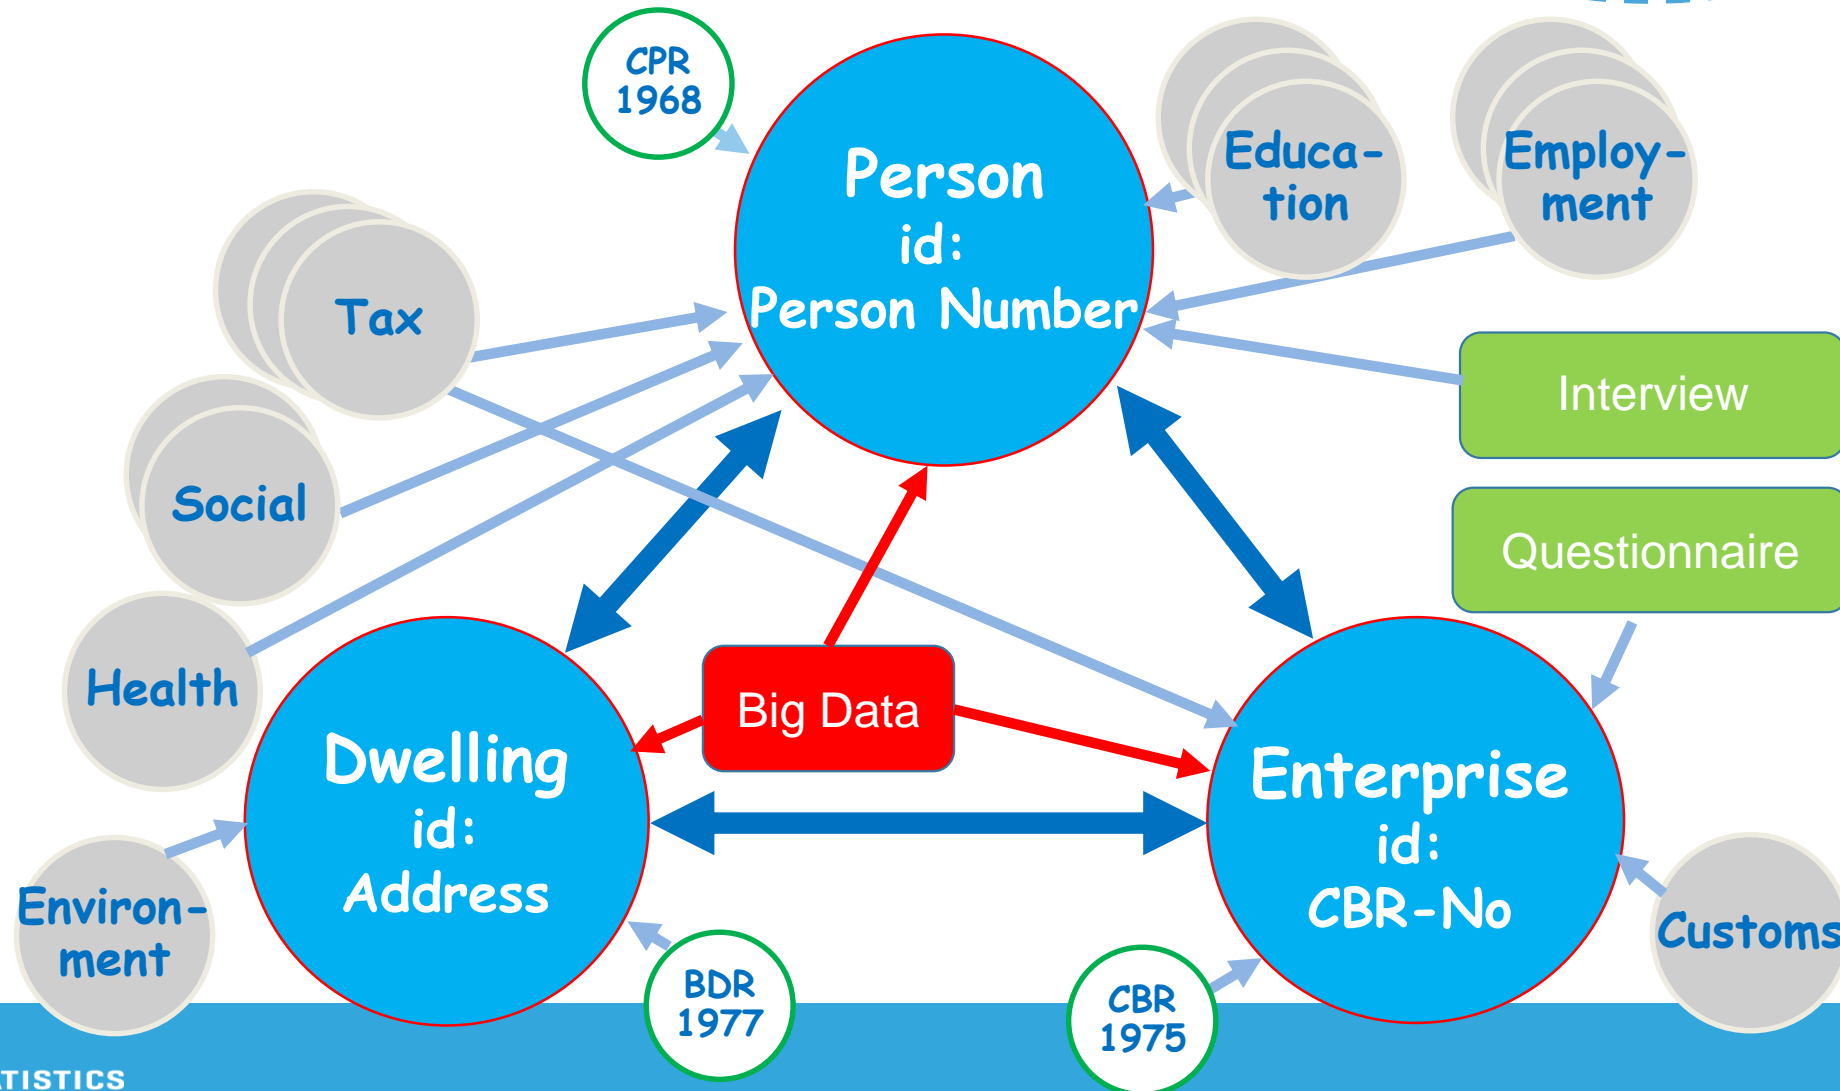

The long and winding road

The register based system

- 3 basic registers: Persons (CPR), Business (CVR) and Buildings and Dwellings (BBR)
- 150 other admin. registers are received and linked via these basic registers
- For social statistics surveying is limited to LFS and EU-SILC variables, which are not available from admin. registers
- For business statistics fewer registers are available, but we use all relevant registers available, incl. VAT, Customs data, XBRL, automobiles, bankruptcies, farms etc.
- Other business data are collected system-to-system or via on-line questionnaires. (All data collection is digital by law since 2010)
- The rest is received as Big Data, e.g. scanner data, Smart Meter, AIS, booking systems etc.

Micro Data Linking (MDL)

Examples outside social statistics

- Central Admin. Business Register (for SBR and business demography)
- Register of Buildings and Dwellings (for STS - among others)
- VAT (for STS, QNR and SBR)
- XBRL (for SBS and financial accounts)
- Customs data (for ITGS and BoP)
- Automobile register (for STS)
- Bankruptcies (incl. filings)
- Register of agricultural holdings (for SBR and FSS)
- Accounts for agricultural holdings and fishery / aquaculture
- Live stock, pesticides etc. (for agricultural statistics)
- Covid compensation schemes
- Booking and renting of holiday houses (tourism statistics)
- Scanner / barcode data (for CPI)
- Smart meter data (for STS and environmental statistics)
- AIS (gps data – sea transport / harbour statistics)
- Ticket sales, lending from libraries etc. (cultural statistics)
- Owners and Executive Board members

Danish statistics based on Tax data

- Structural Business Statistics
 - Enterprises' Tax Accounts
 - Covid compensation schemes for enterprises
- Short Term Statistics
 - VAT data (STS, foreign trade, SBR)
 - Customs data
 - Registration (sales) of new cars (register of vehicles)
 - Building and construction (register of buildings and dwellings)
- Social statistics
 - Employment and salaries ('e-Income' register)
 - Individuals' and households' income and wealth
 - Structural statistics on households' dwelling conditions
- Macro-economic
 - Tax payments from households and corporations
- Geospatial / environmental statistics
 - Land ownership

*Data are delivered
as identifiable
micro data –
confidentiality
guaranteed*

What is 'admin data' in this context?

- Structured information which is originally ...
- collected by other authorities for their own purposes ...
- re-used by the NSI for official statistics.

Administrative data
should be viewed
not as a
cost to the state
but as a
valuable asset

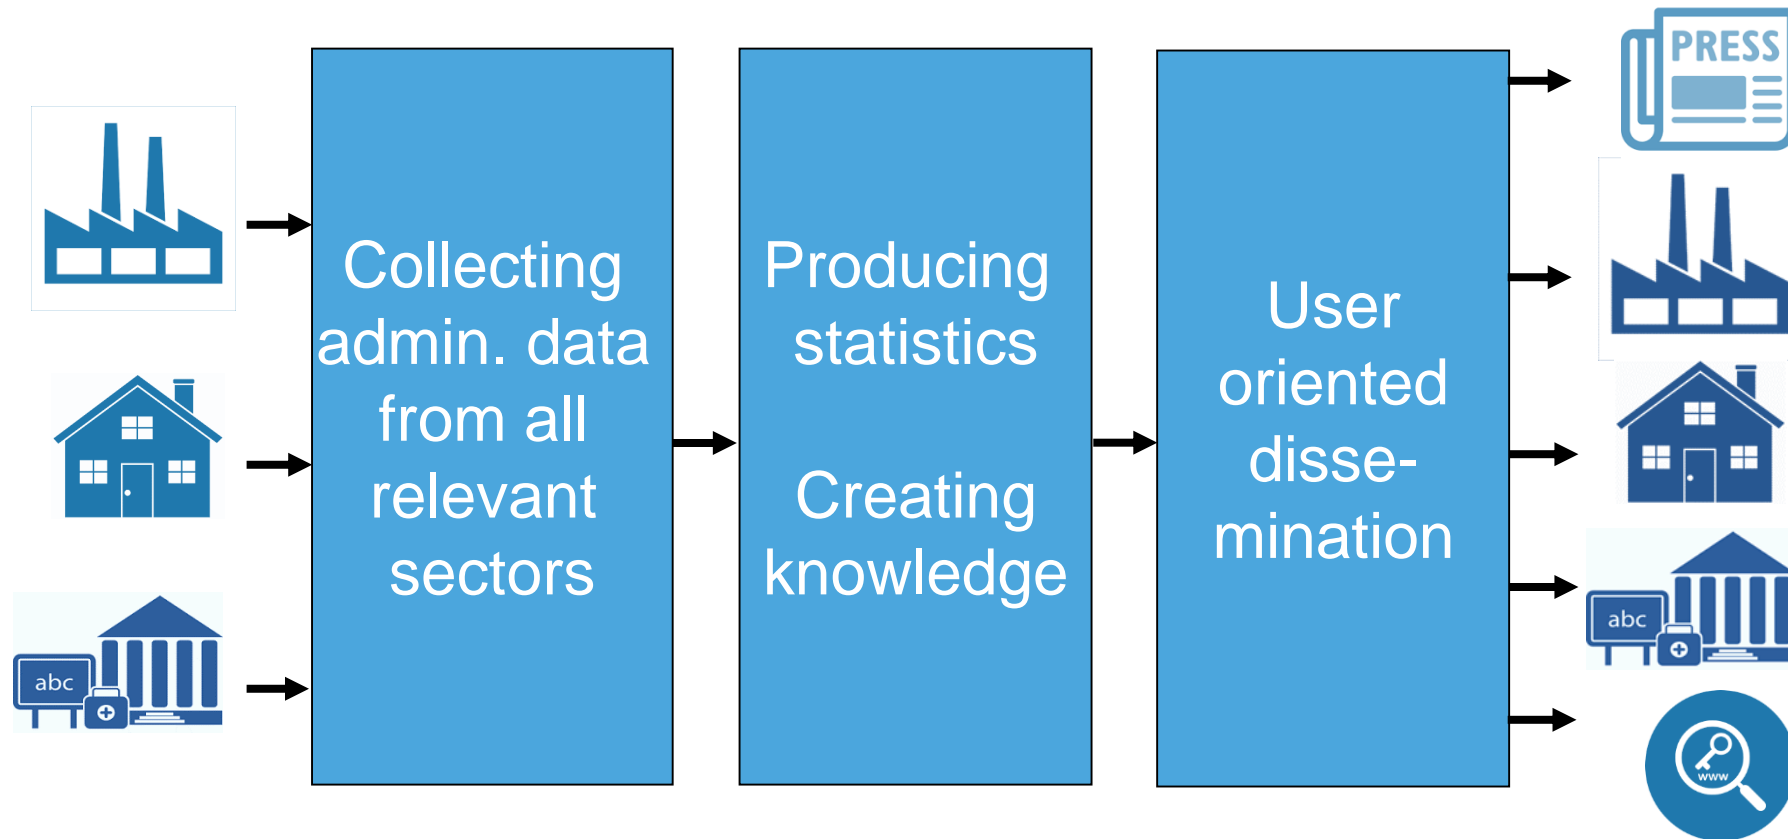

What are the advantages?

- Coverage
- Structure
- Coherence
- Accuracy
- Combining & linking
- Longitudinal studies
- Cost-effectiveness (“average price per data point”)
- Flexibility (“n:m” combinations and MDL)

How does the process work?

How is data managed?

- Admin. registers are received, edited and organised in **statistical registers**
- Data is **integrated** across subject areas and time
- Statistical registers are **combined** to give comprehensive and new information
- **Investment with high returns**

How does data sharing materialize?

- **Cooperation is key:** Thorough discussions at strategic as well as practical level
 - Is it OK **NOT** to share to data?
- Focus on **common interests** / solutions – **win-win situations** and ‘enabling **incentives**’
- **Data sharing agreements** (MoU) with data owners regarding content and conditions
- Raise awareness of the importance of **high quality** data registration
- Ensure adequate **data protection**

Standard Template for data delivery MoUs

1. Background and purpose
2. Delimitation of the data delivery in question
 - 2.1 Legal basis
 - 2.2 Definition / listing of data items covered
 - 2.3 Technical format for data delivery
 - 2.4 Time / frequency for data delivery
3. Data minimisation (cf. EU legislation)
4. Terms for amending and discontinuing the agreement
5. Signature by authorised managers

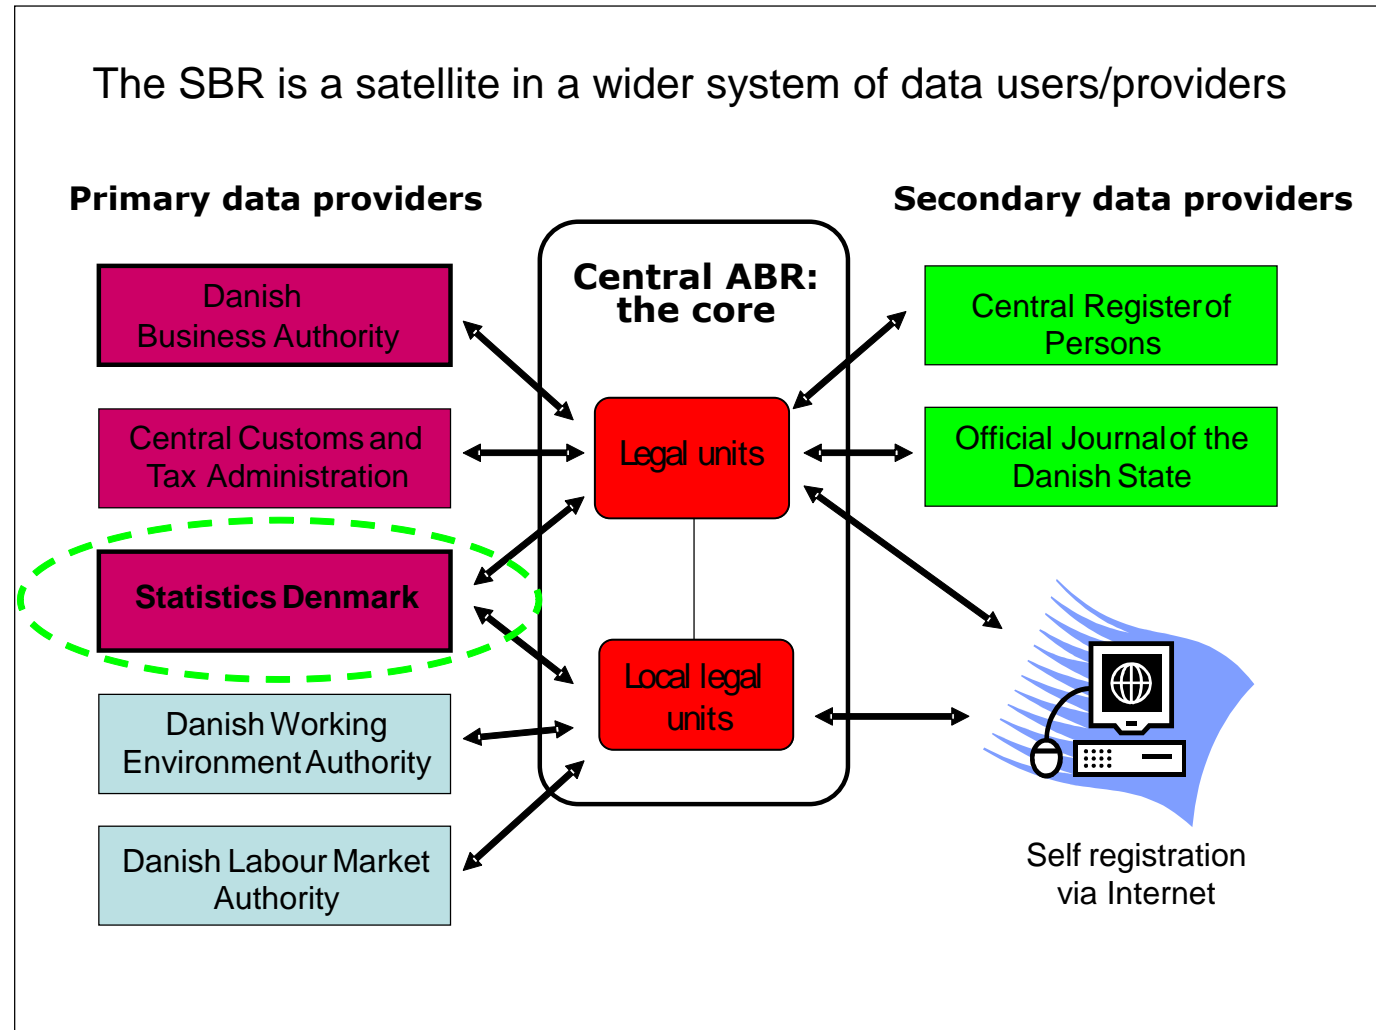

The template ensures that legal requirements are complied with

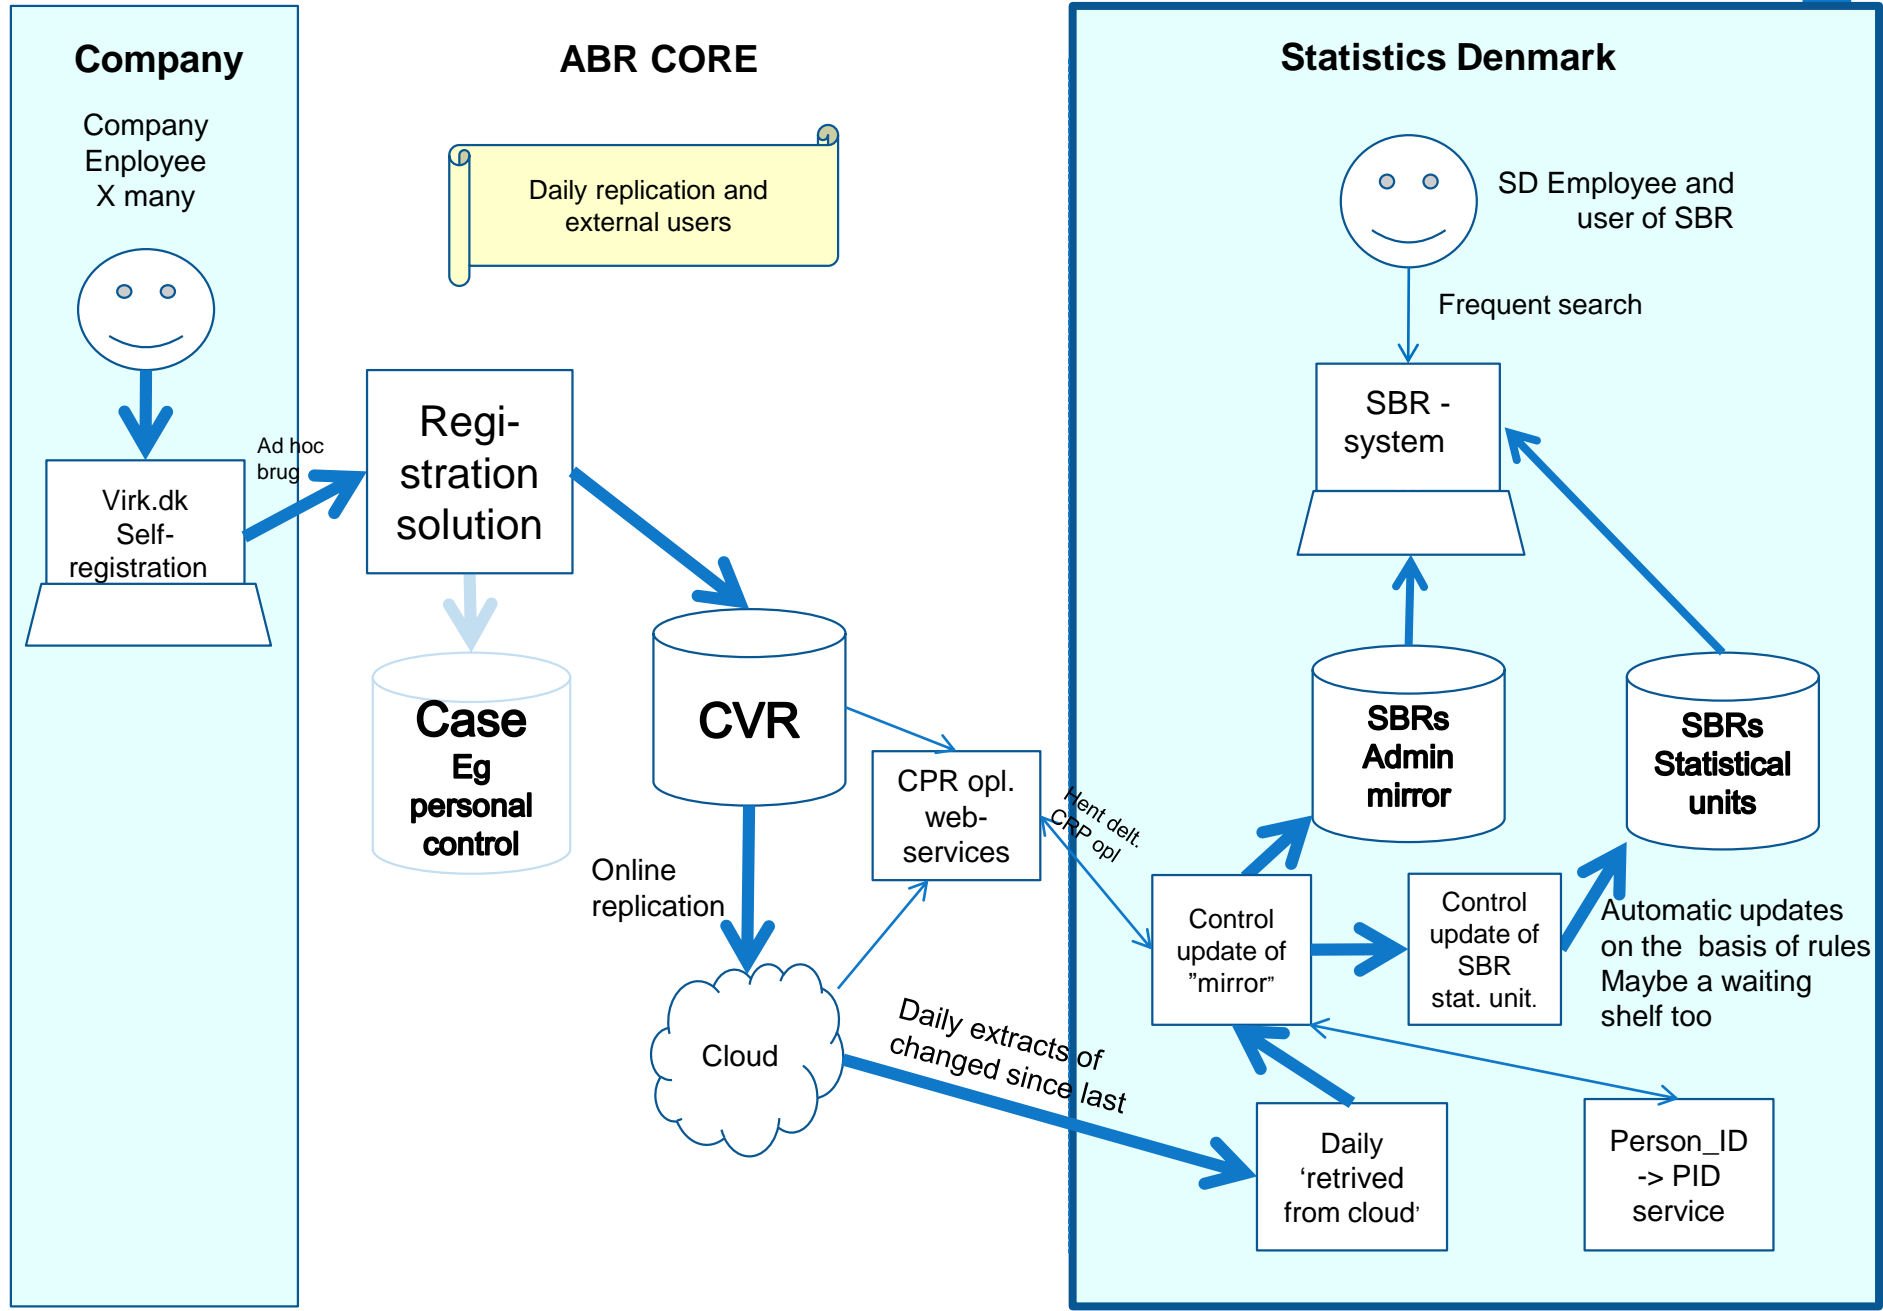

How is public trust maintained?

- **Data protection legislation / agreements** must be in place and complied with
- **Data security rules and systems** must be in place and used
- Individual data records/items ('micro data') are confidential
- Data on physical persons are given random identifiers
- No statistical info about individual persons or enterprises is 'sent back' (**'one way traffic'**)

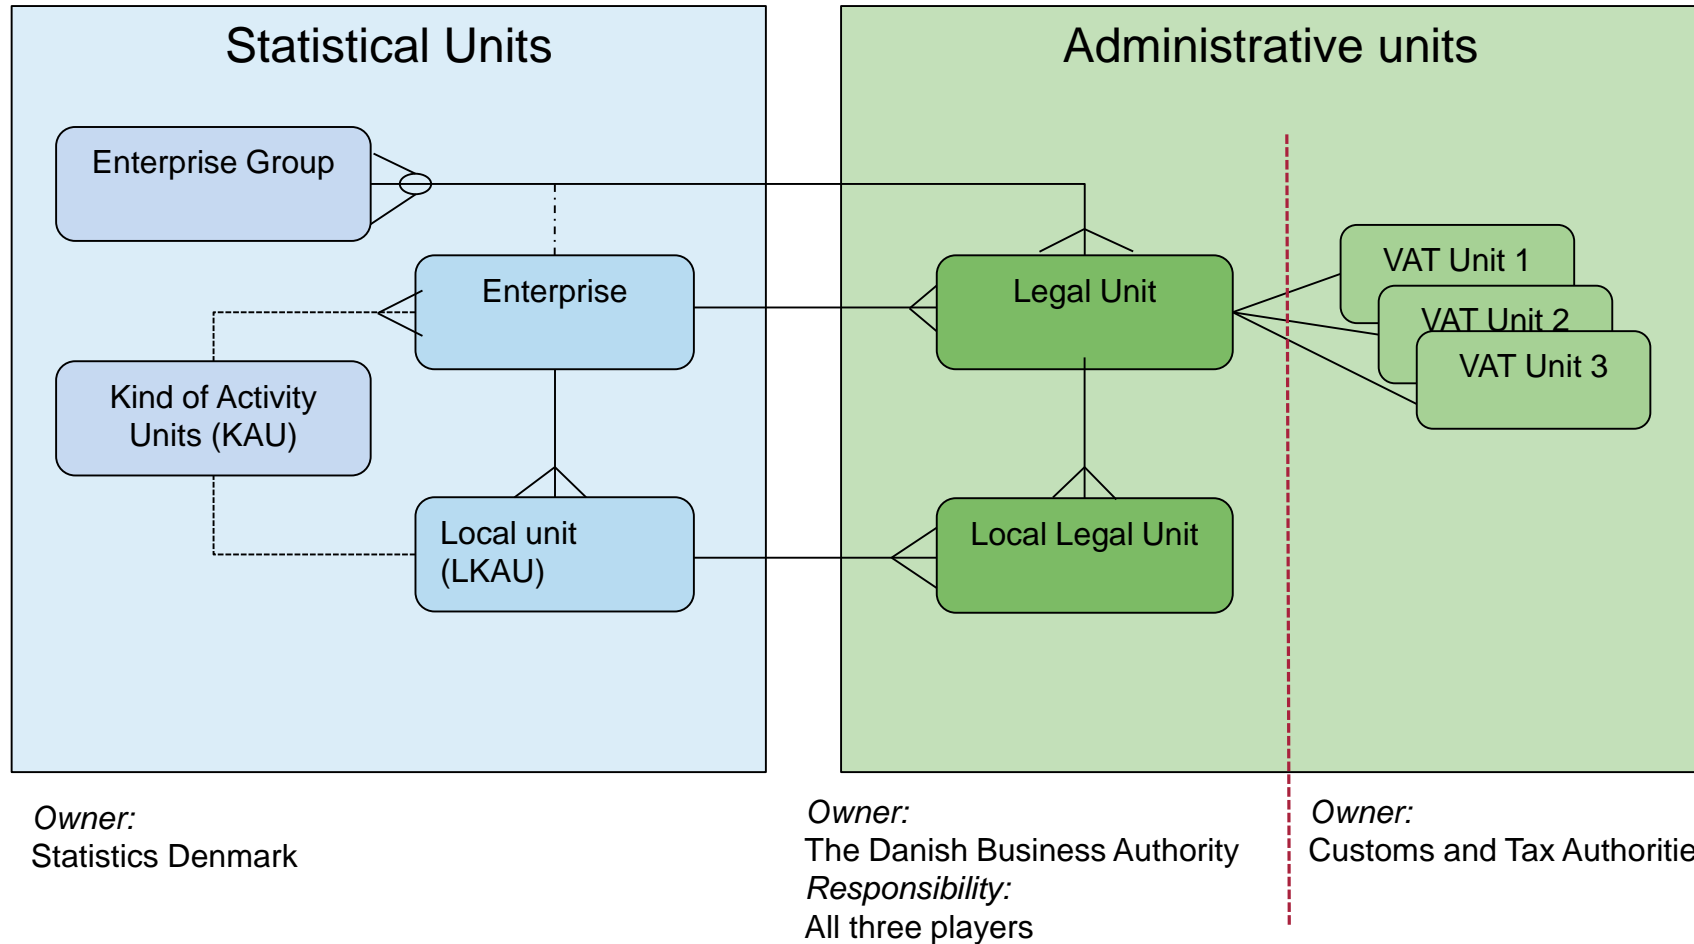

Zooming in on the statistical business register

Business Register – the national set-up

Basic data model for the Danish SBR

Examples of tables in the Danish SBR

Datamodel and temporal implementation

Enterprise (OK)

- OK_no
- Start_dato
- End_Dato

 {0, 1, 2, 3}
Level 0 = Principal activity
Level 1 = Secondary activity no 1
 ...
- Activity code =
 Danish Nace Rev. 2

SBR - context and content

The SBR has a up-to-date data base of all private and public enterprises in Denmark (low threshold for registration)

The SBR is maintained on the basis of the Law on Statistics DK

The SBR contains all basic data to construct/extract and maintain all survey populations

The most important characteristics/variables maintained are:

- ID_number, name and address
- Creation and cessation
- Ownership and institutional sector
- Activity (main and up to three secondary)
- Statistics (turnover and employment)
- Relations to other (types of) units
- Historical information
- Telephone no. and email-address

The Danish business structure cf. the SBR

Approx. 800.000 enterprises ~ legal units

- Activity Code
 - Main: all, Secondary 1: 10%, Secondary 2: 2 %, Secondary 3: 0,4 %

Approx. 950.000 local units

- Activity Code
 - Main: all, Secondary 1: 9%, Secondary 2: 1,7 %, Secondary 3: 0,4 %

Non-active units (approx. 2%)

Many very small (insignificant) units (approx 50 %)

- 60 % has turnover; 25 % has employees
- Below Danish threshold 60 %
- 92 % not part of SDs data collection

Very few very important units (approx. 10% of the units have 80% of the turnover; 0,2 % have 60%)

Vice versa for the public limited companies

Only few enterprises (less than 4%) have more than one LKAU

Growing number of units in services, decline in manufacturing

SBR quality assurance in a nut shell

Automatic corrections

- Validity, consistency and coherence

Manual controls

- Workplace and employees
- NACE

Collaboration with the various statistics sections in SD

- Feedback from the respondents
- Data reported by the respondents

Use of SBR for surveys in Denmark

SBR is used in >100 different statistics (structural, short-term, register based, sample based) in 8 divisions / 3 directorates:

Either as the statistical business units, or by

Adding characteristics to other types of statistical units

Approx. 165 recurring extracts each year

Approx. 50 pct. of NSI staff are on-line users of SBR and extract system

Examples:

- Expected investments in the manufacturing sector
- Employment in construction sector
- Stocks in manufacturing and whole sale
- Purchases of goods and services in construction sector

Usage of SBR in Denmark – more examples

Sales of goods in the in the manufacturing sector

Consumer credits

Financial sector companies

Government finance statistics

Statistics on utilities

Retail trade index

Companies' sales and purchases

Inward FATS

Business demography

General accounts statistics (SBS)

Structural employment statistics (obs)

Tourism statistics

Usage of the SBR

- “Live” vs. “Frozen” register
- Survey samples are drawn using background (stratification) variables from SBR
- Enumeration
- All business statistics are distributed on the basis of either activities, size or location – all data drawn from the SBR
- Business Demography
- Response burden management – keeping track of the number of contacts to small/medium sized enterprises (SMEs)

Frozen frames from the SBR

- Quarterly and annual frames in a preliminary and a final version
- Only "thawed" (= updated after freezing) in case of serious errors - and then by Steering Committee decision
- Is to be used as sample frame and for adjustments after data collection
- Name and address are validated against SBR before contacting the reporting entities

Frozen frames from the SBR (cont.)

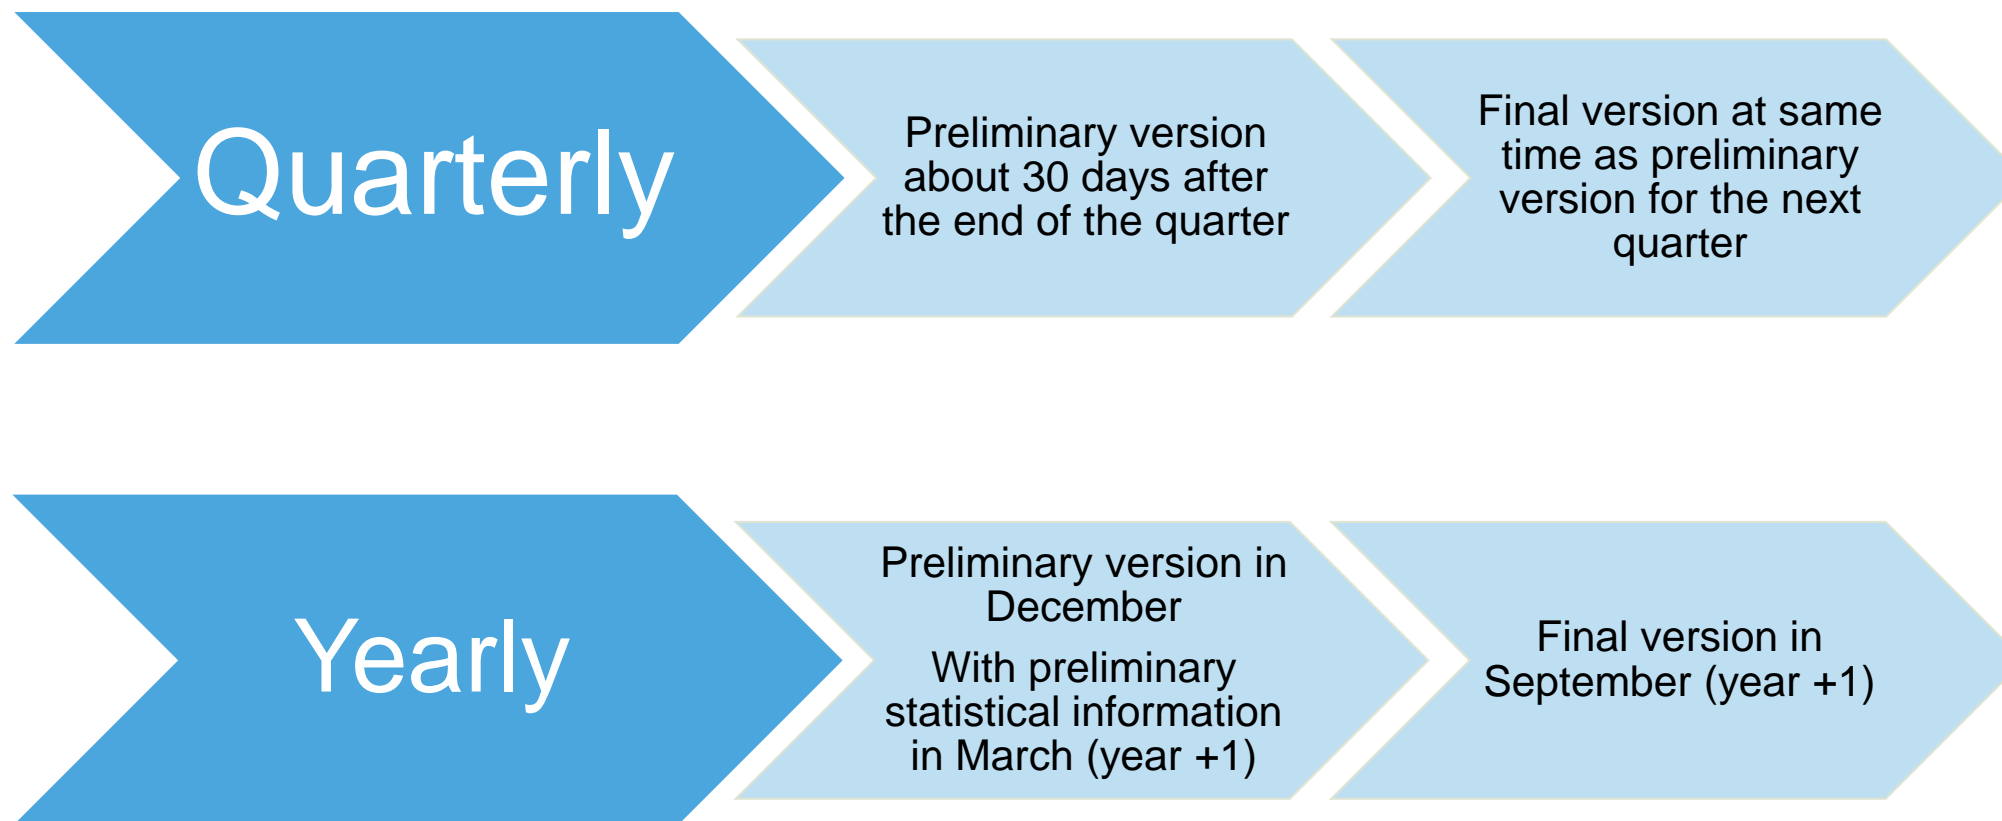

What to expect:

- The agreed quality assurance programs are done
- Consistency of relations between units
- Consistency of NACE-code between legal units and local units
- Observance of values (ex. NACE, legal form)
- Coverage of more than 99,9% - a few are deleted

What not to expect:

- Correct NACE-code for every unit
- Full address for every unit
- All demographic relations are found and implemented

Frozen frames from SBR - time schedule

The national Basic Data Initiative

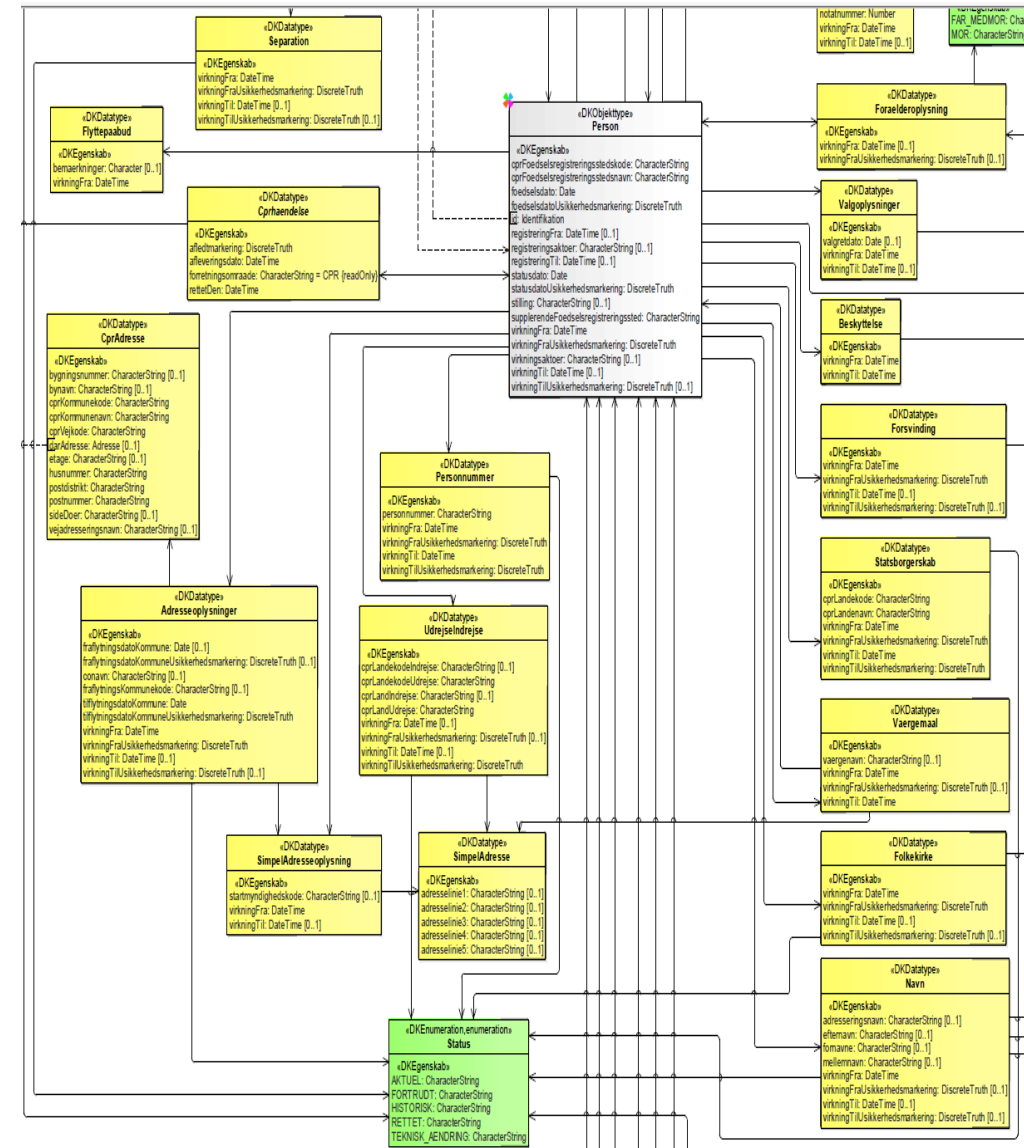

The Basic Data Initiative

- Initiated by the Danish Government, the municipalities and the Danish Regions
- Achieved through a series of sub-projects
- Fully implemented in 2020
- Aims at securing:
 - Free, fast and reliable access to Basic Data
 - High quality and coherent Basic Data updated at one place
- Aims at contributing to:
 - Increased effectiveness, modernization and high-quality public administration
 - Increased innovation, growth and job creation
 - Reduction of costs

The Data Model

- Prior to the Basic Data Initiative, data was documented and modelled in different ways, making them difficult to combine
- Solution: Creation of a coherent common model for all Basic Data
- Characteristic feature of the model that objects and attributes are unique and can only be found in one Basic Data register

The Data Distributor

- Basic Data is distributed through The Data Distributor
- Secure, stable and scalable platform
- High availability (99,9%) and high performance
- Possible to compile data from different registers in a single service
- Much more than just a machine ...

Usage of admin data in the production – overall view

Advantages of central data sources – the ‘ladder’

Level 5: Digital partnerships with central supplier of data – structured or unstructured

Level 5 Central provider supplies NSI with comprehensive data from “all” enterprises

Level 4: Automatic reporting

Level 4 ERP systems are adapted to automatically transfer data to NSI. Data approved by enterprise.

Level 2-3
Semi-automatic reporting

Level 3 ERP systems are adapted to facilitate transfer of data to NSI. Data approved by enterprise.

Level 2 APP exports data from internal business systems. Data validated and approved by enterprise.

Level 1: Manual file upload

Level 1 Enterprise exports data from internal business system. Data file uploaded with/without validation at source.

Baseline

Enterprise enters data into digital questionnaire or APP questionnaire. Data validated and approved by business.

Increasing value per observation

Decreasing cost per observation

Logical view of the standardized production
