

## **EU Twinning Project JO 21 ENI ST 01 22**

### **Component 2:**

### **Methodology for producing Small Area Statistics**

**Strengthening the capacity of Jordan's Department of Statistics in terms of compilation, analysis and reporting of statistical data in line with International and European best practices.**

## **INTRODUCTION TO**

**Tomas Rudys, Statistics Lithuania. State Data Agency  
12-16 February 2023, Amman, Hashemite Kingdom of Jordan**

# Outline

- ▶ What is R (and CRAN)?
- ▶ Installing Base R (console, first script)
- ▶ R GUI (RStudio introduction)
- ▶ GSBPM and available R modules and libraries
- ▶ Introduction to R
- ▶ Getting data into R and outputting results
- ▶ Reading. Conferences
- ▶ Useful to know

Are You ready?

You ready?

# What is R?

- ▶ R is a **free** language and environment for statistical computing and graphics.
- ▶ It is **object-oriented** programming language.
- ▶ **Designed by:** Ross Ihaka and Robert Gentleman.
- ▶ **First appeared:** August 1993; 28 years ago
- ▶ **Developers:** R Core Team.
- ▶ **Operating systems:** Windows, Linux, MacOS.
- ▶ R's capabilities are extended through user-created **packages**, which offer statistical techniques, graphical devices, import/export, reporting (RMarkdown, knitr), etc.
- ▶ Webpage: **<https://www.r-project.org/>**

# CRAN

- ▶ **The Comprehensive R Archive Network (CRAN)** is R's central software repository, supported by the R Foundation.
- ▶ It contains an archive of the latest and previous versions of the R distribution, documentation, and contributed **R packages**.
- ▶ CRAN: **<https://cran.r-project.org/>**
- ▶ CRAN Mirrors: **<https://cran.r-project.org/mirrors.html>**

## Installing Base R

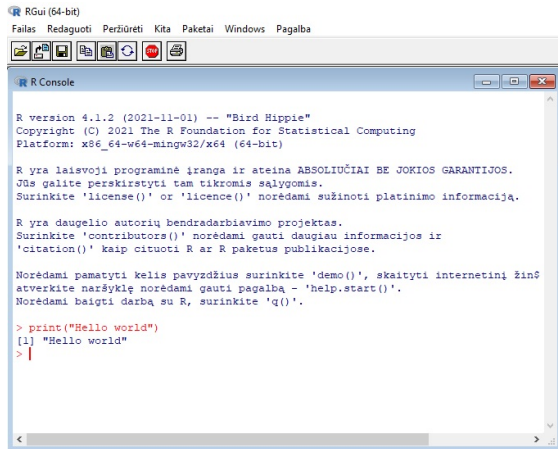

- ▶ Go to the R Project for Statistical Computing webpage:  
**<https://www.r-project.org/>**
- ▶ Find link to CRAN and choose your preferred **CRAN mirror**
- ▶ Press **Download R for Windows**
- ▶ Choose **base** for base R installation
- ▶ Choose **Download R 4.2.2 for Windows**

OR

- ▶ Go directly to CRAN webpage  
**<https://cran.r-project.org/index.html>**
- ▶ Press **Download R for Windows**
- ▶ Choose **base** for base R installation
- ▶ Choose **Download R 4.2.2 for Windows**

The R \*.exe file for installation will be downloaded to your computer (eg. R-4.2.2-win.exe)

# R console (first script example)

The screenshot shows the RGui (64-bit) application window. The title bar reads "RGui (64-bit)". The menu bar includes "Failas", "Redaguoti", "Peržiūrėti", "Kita", "Paketai", "Windows", and "Pagalba". The toolbar contains icons for file operations and execution. The main window is titled "R Console" and displays the following text:

```
R version 4.1.2 (2021-11-01) -- "Bird Hippie"  
Copyright (C) 2021 The R Foundation for Statistical Computing  
Platform: x86_64-w64-mingw32/x64 (64-bit)  
  
R yra laisvoji programinė įranga ir ateina ABSOLIUČIAI BE JOKIOS GARANTIJOS.  
Jūs galite persikirstyti tam tikromis sąlygomis.  
Surinkite 'license()' or 'licence()' noredami sužinoti platinimo informaciją.  
  
R yra daugelio autorių bendradarbiavimo projektas.  
Surinkite 'contributors()' noredami gauti daugiau informacijos ir  
'citation()' kaip cituoti R ar R paketus publikacijose.  
  
Norėdami pamatyti kelis pavyzdžius surinkite 'demo()', skaityti internetinį žin  
atverkite naršyklę noredami gauti pagalbą - 'help.start()'.  
Norėdami baigti darbą su R, surinkite 'q()'.  
  
> print("Hello world")  
[1] "Hello world"  
> |
```

# R graphical user interface (GUI)

- ▶ **RStudio**
- ▶ Rattle
- ▶ StatET for R
- ▶ RKWard
- ▶ JGR
- ▶ **R Commander** (package Rcmdr)
- ▶ Deducer
- ▶ JASP
- ▶ Tinn-R
- ▶ BlueSky Statistics

# Different RStudio versions

There are two versions of RStudio:

**RStudio Desktop**

Run RStudio on your desktop

**RStudio Server**

Centralize access and computation

# RStudio installation

- ▶ **RStudio**: <https://posit.co/>
- ▶ Products -> RStudio IDE -> Download RStudio
- ▶ Find RStudio Desktop
- ▶ Download RStudio
- ▶ Two steps:
  1. Download and install R (if you don't have it)
  2. Install Rstudio: press Download RStudio desktop for windows

The RStudio \*.exe file for installation will be downloaded to your computer (eg. RStudio-2022.12.0-353.exe)

# RStudio Cheatsheets

https://posit.co/wp-content/uploads/2022/10/rstudio-ide-1.pdf

## RStudio IDE : : CHEAT SHEET

### Documents and Apps

Open Shiny, R Markdown, knitr, Sweave, LaTeX, Rd files and more in Source Pane

Check spelling output Render output Choose format options Configure render options Insert chunk Publish to server

Access markdown guide at **Help > Markdown Quick Reference**  
See reverse side for more on **Visual Editor**

RStudio recognizes that file names **app.R**, **server.R**, **ui.R** and **global.R** belong to a shiny app

### Package Development

Create a new package with **File > New Project > New Directory > R Package**  
Enable markdown documentation with **Tools > Project Options > Build Tools**

Roxygen guide at **Help > Roxygen Quick Reference**  
See package information in the **Build Tab**

Install package and restart R Run devtools::load\_all() and reload changes

### Source Editor

Navigate backwards/forwards Open in new window Find and replace Compile as notebook Run selected code

### Tab Panes

Import data with wizard History of past commands to run/copy Manage external databases View memory usage R tutorials

### Version Control

Turn on at **Tools > Project Options > Git/SVN**  
Added Deleted Modified Renamed Untracked

### Debug Mode

Use **debug()**, **browser()**, or a breakpoint and execute your code to open the debugger mode.

Launch debugger mode from origin Open traceback to examine the functions that R called before the error occurred

RStudio opens plots in a dedicated **Plots** pane

RStudio opens documentation in a dedicated **Help** pane

GUI **Package manager** lists every installed package

**Viewer** pane displays HTML content, such as Shiny apps, R Markdown reports, and interactive visualizations

Click next to line number to add/remove a breakpoint. Highlighted line shows where execution has paused

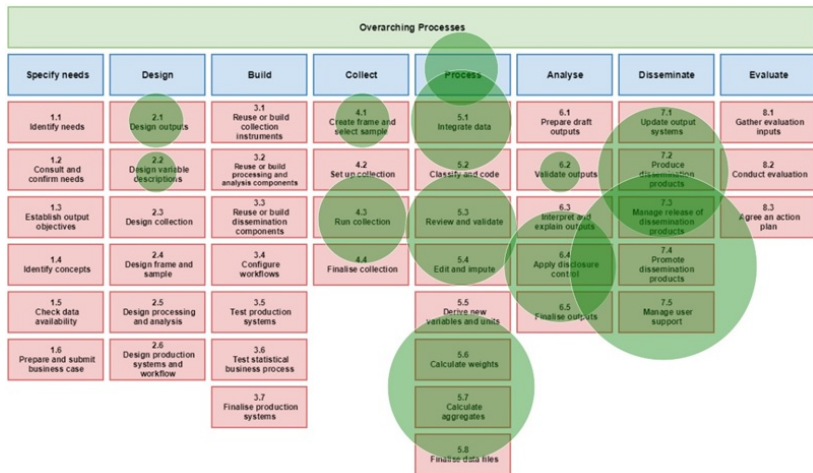

# RStudio: an introduction

**Live demo**

# GSBPM and R

Awesome official statistics software (Olav ten Bosch):

<https://github.com/SNStatComp/awesome-official-statistics-software>

## GSBPM and R

Not just R packages!!!

## CRAN task views

- ▶ The “**Task Views**” page (subject list) on the CRAN website lists a wide range of tasks (in fields such as Finance, Genetics, High Performance Computing, Machine Learning, Medical Imaging, Official statistics) for which R packages are available.
- ▶ Link: <https://cran.r-project.org/web/views/>

### CRAN Task View: Official Statistics & Survey Statistics

- Maintainer:** Matthias Templ, Alexander Kowarik, Tobias Schoch  
**Contact:** matthias.templ@gmail.com  
**Version:** 2022-11-17  
**URL:** <https://CRAN.R-project.org/view=OfficialStatistics>  
**Source:** <https://github.com/cran-task-views/OfficialStatistics/>  
**Contributions:** Suggestions and improvements for this task view are very welcome and can be made through issues at the maintainer address. For further details see the [Contributing guide](#).  
**Citation:** Matthias Templ, Alexander Kowarik, Tobias Schoch (2022). CRAN Task View: Official Statistics & <https://CRAN.R-project.org/view=OfficialStatistics>.  
**Installation:** The packages from this task view can be installed automatically using the [ctv](#) package. For example, `coreOnly = TRUE`) installs all the core packages or `ctv::update.views("OfficialStatistics")` install up-to-date. See the [CRAN Task View Initiative](#) for more details.

This CRAN Task View contains a list of packages with methods typically used in official statistics and survey statistics than one of the topics listed below. Therefore, this list is not a strict categorization and packages may be listed more than

The task view is split into several parts

## R packages

- ▶ **R packages** are extensions to the R statistical programming language. R packages contain code, data, and documentation in a standardised collection format that can be installed by users of R, typically via a centralised software repository such as CRAN.
- ▶ **<https://cran.r-project.org/index.html> -> Packages**
- ▶ Currently, the CRAN package repository features **19144** available packages.
- ▶ Available Packages: **[https://cran.r-project.org/web/packages/available\\_packages\\_by\\_name.html](https://cran.r-project.org/web/packages/available_packages_by_name.html)**
- ▶ Every package has its own webpage: **<https://cran.r-project.org/web/packages/sae/index.html>**

## R packages (instalation)

- ▶ Install R package with function **install.packages("name\_of\_the\_package")** in your R script:

```
install.packages("sae")
```

- ▶ In RStudio use the tab **Packages** -> **Install**. The window for installation will appear.
- ▶ Or install from downloaded file.

## R packages (loading)

- ▶ Once installed R packages have **to be loaded into the session** to be used.

```
library(xyz)
```

The **library()** by default returns an error if the requested package does not exist.

```
require(xyz)
```

The **require()** is designed to be used inside functions as it gives a warning message and returns a logical value say, FALSE if the requested package is not found and TRUE if the package is loaded.

## R packages (loading example)

```
library(sae)
```

```
## Įkeliamas reikalingas paketas: MASS
```

```
## Įkeliamas reikalingas paketas: lme4
```

```
## Įkeliamas reikalingas paketas: Matrix
```

## R packages (example of using package functions)

```
# Load data set with synthetic income data for provinces (  
data(incomedata)  
# Load population sizes of provinces  
data(sizeprov)  
# Compute Horvitz-Thompson direct estimator of mean income  
# province under random sampling without replacement within  
result1 <- direct(y=income, dom=prov, sweight=weight,  
domsize=sizeprov[,2:3], data=incomedata)  
head(result1)
```

| ##   | Domain | SampSize | Direct    | SD        | CV        |
|------|--------|----------|-----------|-----------|-----------|
| ## 1 | 1      | 96       | 7121.005  | 978.9280  | 13.747049 |
| ## 2 | 2      | 173      | 13091.669 | 1380.7139 | 10.546508 |
| ## 3 | 3      | 539      | 13054.001 | 697.0416  | 5.339678  |
| ## 4 | 4      | 198      | 13158.890 | 1242.0200 | 9.438638  |
| ## 5 | 5      | 58       | 10592.494 | 1802.3255 | 17.015120 |
| ## 6 | 6      | 494      | 13213.102 | 759.5069  | 5.748134  |

## Working with R packages

- ▶ The **pacman** package provides a function to automatically install a package if it is not available locally. In addition to CRAN it also tries to install from Bioconductor.

```
#install.packages("pacman")
```

```
library(pacman)
```

```
p_load("survey", "sampling", "ggplot3")
```

```
## Warning: package 'ggplot3' is not available for this version of R
```

```
##
```

```
## A version of this package for your version of R might be available from another source, e.g. a
```

```
## see the ideas at
```

```
## https://cran.r-project.org/doc/manuals/r-patched/R-admin.html
```

```
## Warning: nepavyko pasiekti saugyklos http://www.stats.ox.ac.uk/
```

```
## nepavyko atverti URL 'http://www.stats.ox.ac.uk/pub/RWeb'
```

```
## Warning: 'BiocManager' not available. Could not check for updates
```

```
##
```

```
## Please use `install.packages('BiocManager')` and then re-run this command
```

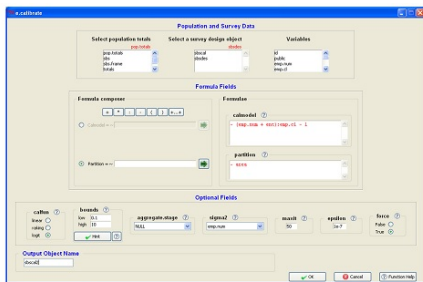

## R tools outside CRAN

**REGENESEES** (R EVOLVED GENERALISED SOFTWARE FOR SAMPLING ESTIMATES AND ERRORS IN SURVEYS) BY ISTAT (Diego Zardetto).

- ▶ **<https://www.istat.it/en/methods-and-tools/methods-and-it-tools/process/processing-tools/regeneeses>**
- ▶ webpage: **<https://diegozardetto.github.io/ReGenesees/>**
- ▶ Main Statistical Functions:
  - ▶ Complex Sampling Designs
  - ▶ Calibration
  - ▶ Basic Estimators
  - ▶ Variance Estimation
  - ▶ Estimates and Sampling Errors (standard error, variance, coefficient of variation, confidence interval, design effect)
  - ▶ Estimates and Sampling Errors for Complex Estimators

# R tools outside CRAN

**ReGenesees.GUI** provides a Graphical User Interface for the ReGenesees package, based on tcltk. - It has been developed for users who might prefer to interact with ReGenesees through a user-friendly mouse-click graphical interface (rather than through R's command line).

A data table from the ReGenesees 1.0 GUI. The table has columns for "id", "publ", "exp.nub", "exp.ci", "str", "str.frame", "strs", "va.ci", "va", "dual", "str", "str.frame", "strs", "id", "publ", "exp.nub", "exp.ci".

| id | publ  | exp.nub | exp.ci | str     | str.frame | strs | va.ci | va | dual   | str | str.frame | strs       | id          | publ               | exp.nub | exp.ci |
|----|-------|---------|--------|---------|-----------|------|-------|----|--------|-----|-----------|------------|-------------|--------------------|---------|--------|
| 1  | 1268  | 0       | 38     | (19,49) | 1210      | 1    | 32    | 0  | Center | 22  | 5500.0    | 1.1(19,49) | Agriculture | Agriculture.Center |         |        |
| 2  | 1268  | 0       | 38     | (19,49) | 1240      | 1    | 32    | 0  | Center | 19  | 1500.0    | 1.1(19,49) | Agriculture | Agriculture.Center |         |        |
| 3  | 13819 | 0       | 25     | (19,49) | 1331      | 1    | 41    | 0  | Center | 16  | 480.0     | 1.1(19,49) | Agriculture | Agriculture.Center |         |        |
| 4  | 13819 | 0       | 25     | (19,49) | 1331      | 1    | 41    | 0  | Center | 16  | 480.0     | 1.1(19,49) | Agriculture | Agriculture.Center |         |        |

# Introduction to R

“**An Introduction to R**” by W. N. Venables, D. M. Smith and the R Core Team.

- ▶ Getting help with functions and features

```
help(mean)
```

An alternative is

```
?mean
```

In RStudio use Help Tab.

# Introduction to R

- ▶ R commands **are case sensitive**

```
a = 5  
A = 2  
a + A
```

```
## [1] 7
```

- ▶ Comments

```
# This is comment
```

- ▶ Commands are separated either by a semi-colon (';'), or by a newline.

```
a = 5; A = 2  
a; A
```

```
## [1] 5
```

```
## [1] 2
```

# Introduction to R

- ▶ The entities that R creates and manipulates are known as **objects**.

These may be variables, arrays of numbers, character strings, functions, or more general structures built from such components.

```
a = 5; A = 2  
objects()
```

```
## [1] "a"          "A"          "incomedata" "result1"
```

```
ls()
```

```
## [1] "a"          "A"          "incomedata" "result1"
```

## Introduction to R

- ▶ To remove objects the function **rm** is available:

```
a = 5; A = 2  
ls()
```

```
## [1] "a"          "A"          "incomedata" "result1"
```

```
rm(a)  
ls()
```

```
## [1] "A"          "incomedata" "result1"    "sizeprov"
```

- ▶ remove all objects:

```
rm(list = ls())  
ls()
```

```
## character(0)
```

# Introduction to R

- ▶ If commands are stored in an external file, say **script\_1.R** and **script\_2.R**:

```
source("C:\\Users\\TomasR\\Desktop\\Jordan\\R_intro\\script
```

```
## [1] 5
```

```
## [1] 2
```

```
source("C:\\Users\\TomasR\\Desktop\\Jordan\\R_intro\\script
```

```
## [1] 7
```

# Introduction to R

- ▶ Set working directory `setwd()`
- ▶ Get working directory `getwd()`

```
setwd("C:\\Users\\TomasR\\Desktop\\Jordan\\R_intro")  
getwd()
```

```
## [1] "C:/Users/TomasR/Desktop/Jordan/R_intro"
```

```
source("script_1.R")
```

```
## [1] 5
```

```
## [1] 2
```

```
source("script_2.R")
```

```
## [1] 7
```

- ▶ **Recommendation:** in RStudio good practice to work by creating R projects

# Introduction to R

- ▶ R operates on named data structures. The simplest such structure is the numeric vector.
- ▶ Assignment operators: `<-` usually `=` works also
- ▶ Assignment: use function `c()` or `assign()`

```
x <- c(1, 2, 3, 4, 5)
```

```
x
```

```
## [1] 1 2 3 4 5
```

```
c(1, 2, 3, 4, 5) -> x
```

```
x
```

```
## [1] 1 2 3 4 5
```

# Introduction to R

```
assign("x", c(1, 2, 3, 4, 5))
```

```
x
```

```
## [1] 1 2 3 4 5
```

```
y = c(x, 0, x)
```

```
y
```

```
## [1] 1 2 3 4 5 0 1 2 3 4 5
```

```
# arithmetic: +, -, *, / and ^
```

```
v = 2*x + 1
```

```
v
```

```
## [1] 3 5 7 9 11
```

```
v1 = x + v
```

```
v1
```

```
## [1] 4 7 10 13 16
```

# Introduction to R

```
x = c(1, 2, 3, 4, 5)  
min(x)
```

```
## [1] 1
```

```
max(x)
```

```
## [1] 5
```

```
length(x)
```

```
## [1] 5
```

```
sum(x)
```

```
## [1] 15
```

## Introduction to R

```
x = c(1, 2, 3, 4, 5)
# sum(x)/length(x)
mean(x)
```

```
## [1] 3
```

```
# sum((x-mean(x))^2)/(length(x)-1)
var(x)
```

```
## [1] 2.5
```

```
x = c(2, 1, 3, 5, 4)
sort(x)
```

```
## [1] 1 2 3 4 5
```

# Introduction to R

## ► Generating regular sequences

```
# seq(1,10), seq(from=1, to=10) and seq(to=10, from=1)
seq(1:10)
```

```
## [1] 1 2 3 4 5 6 7 8 9 10
```

```
seq(-2, 2, by=.5)
```

```
## [1] -2.0 -1.5 -1.0 -0.5 0.0 0.5 1.0 1.5 2.0
```

```
seq(length=10, from=-2, by=.5)
```

```
## [1] -2.0 -1.5 -1.0 -0.5 0.0 0.5 1.0 1.5 2.0 2.5
```

# Introduction to R

► Generating regular sequences

```
x = c(2, 3)
rep(x, times=3)
```

```
## [1] 2 3 2 3 2 3
```

```
rep(x, each=3)
```

```
## [1] 2 2 2 3 3 3
```

# Introduction to R

- ▶ Logical vectors are generated by conditions:

```
x = c(5, 6, 7, 2, 3, 7)
log_v = x > 5
log_v
```

```
## [1] FALSE TRUE TRUE FALSE FALSE TRUE
```

The logical operators are `<`, `<=`, `>`, `>=`, `==` for exact equality and `!=` for inequality.

## Introduction to R

If  $c1$  and  $c2$  are logical expressions:

- ▶  $c1 \ \& \ c2$  is their intersection (“and”)
- ▶  $c1 \ | \ c2$  is their union (“or”)
- ▶  $!c1$  is the negation of  $c1$

```
x = c(5, 6, 7, 2, 3, 7)
```

```
c1 = x == 7
```

```
c2 = x <= 2
```

```
log_v = c1 | c2
```

```
log_v
```

```
## [1] FALSE FALSE TRUE TRUE FALSE TRUE
```

# Introduction to R

- ▶ Missing values.
- ▶ **NA** - “not available” or a “missing value”

```
z = c(1:3, NA, 4, NA)
```

```
z
```

```
## [1] 1 2 3 NA 4 NA
```

```
ind = is.na(z)
```

```
ind
```

```
## [1] FALSE FALSE FALSE TRUE FALSE TRUE
```

- ▶ **NaN** - Not a Number

```
0/0
```

```
## [1] NaN
```

```
Inf - Inf
```

```
## [1] NaN
```

# Introduction to R

- ▶ Missing values.
- ▶ **NaN** - Not a Number

```
z = c(1, 2, NA, 0/0, 0/0, Inf - Inf)
```

```
z
```

```
## [1] 1 2 NA NaN NaN NaN
```

```
is.na(z)
```

```
## [1] FALSE FALSE TRUE TRUE TRUE TRUE
```

```
is.nan(z)
```

```
## [1] FALSE FALSE FALSE TRUE TRUE TRUE
```

# Introduction to R

## ▶ Character vectors

```
v = c("a", "b", "c")
```

```
v
```

```
## [1] "a" "b" "c"
```

```
labs = paste(c("X"), 1:5, sep="")
```

```
labs
```

```
## [1] "X1" "X2" "X3" "X4" "X5"
```

# Introduction to R

## ▶ Index vectors

```
x = c(1:3, NA, 4, NA)
```

```
x
```

```
## [1] 1 2 3 NA 4 NA
```

```
x[2]
```

```
## [1] 2
```

```
y = x[!is.na(x)]
```

```
y
```

```
## [1] 1 2 3 4
```

```
x[is.na(x)] <- 0
```

```
x
```

```
## [1] 1 2 3 0 4 0
```

# Introduction to R

Other types of objects:

- ▶ **matrices** or more generally **arrays** are multi-dimensional generalizations of vectors
- ▶ **factors** provide compact ways to handle categorical data
- ▶ **lists** are a general form of vector in which the various elements need not be of the same type, and are often themselves vectors or lists
- ▶ **data frames** are matrix-like structures, in which the columns can be of different types
- ▶ **functions** are themselves objects in R which can be stored in the project's workspace

## Introduction to R

R objects modes: numeric, complex, logical, character and raw

```
z = c(0:9);z
```

```
## [1] 0 1 2 3 4 5 6 7 8 9
```

```
mode(z)
```

```
## [1] "numeric"
```

```
digits = as.character(z); digits
```

```
## [1] "0" "1" "2" "3" "4" "5" "6" "7" "8" "9"
```

```
mode(digits)
```

```
## [1] "character"
```

```
d = as.integer(digits)
```

```
mode(d)
```

```
## [1] "numeric"
```

## Introduction to R

A factor is a vector object used to specify a discrete classification (grouping) of the components.

```
nace = c("4929", "8610", "8610", "5010", "7512", "5012", "5010")
nace_fac = factor(nace)
nace_fac
```

```
## [1] 4929 8610 8610 5010 7512 5012 5010
## Levels: 4929 5010 5012 7512 8610
```

```
levels(nace_fac)
```

```
## [1] "4929" "5010" "5012" "7512" "8610"
```

## Introduction to R

```
x <- array(1:20, dim=c(4,5)); x
```

```
##      [,1] [,2] [,3] [,4] [,5]  
## [1,]    1    5    9   13   17  
## [2,]    2    6   10   14   18  
## [3,]    3    7   11   15   19  
## [4,]    4    8   12   16   20
```

```
x <- array(1:20, dim=c(3,3)); x
```

```
##      [,1] [,2] [,3]  
## [1,]    1    4    7  
## [2,]    2    5    8  
## [3,]    3    6    9
```

```
x[2,3]
```

```
## [1] 8
```

## Introduction to R

```
m = matrix(1:9, nrow = 3, ncol = 3); m
```

```
##      [,1] [,2] [,3]  
## [1,]    1    4    7  
## [2,]    2    5    8  
## [3,]    3    6    9
```

```
m1 = matrix(1:9, nrow=3, byrow=TRUE); m1
```

```
##      [,1] [,2] [,3]  
## [1,]    1    2    3  
## [2,]    4    5    6  
## [3,]    7    8    9
```

# Introduction to R

Elements can be accessed as **var[row, column]**

```
m[1,]
```

```
## [1] 1 4 7
```

```
m[,1]
```

```
## [1] 1 2 3
```

```
# select rows 1 & 2 and columns 2 & 3
```

```
m[c(1,2),c(2,3)]
```

```
##      [,1] [,2]
```

```
## [1,]    4    7
```

```
## [2,]    5    8
```

# Introduction to R

## ► List

```
x = c(5, 6, 7, 2, 3, 7)
v = c("a", "b", "c")
m = matrix(1:4, nrow = 2, ncol = 2)
l <- list("id" = x, "nace" = v, "m" = m)
l
```

```
## $id
## [1] 5 6 7 2 3 7
##
## $nace
## [1] "a" "b" "c"
##
## $m
##      [,1] [,2]
## [1,]    1    3
## [2,]    2    4
```

## Introduction to R

```
l[[2]]
```

```
## [1] "a" "b" "c"
```

```
l[[1]][2]
```

```
## [1] 6
```

```
l[[3]][,1]
```

```
## [1] 1 2
```

# Introduction to R

A data frame is a list with class "data.frame".

```
id = c(1, 2, 3)
nace = c("a", "b", "c")
emp = c(10, 5, 8)
df = data.frame(ent_ID=id, NACE=nace, num_emp=emp)
df
```

```
##   ent_ID NACE num_emp
## 1      1    a      10
## 2      2    b       5
## 3      3    c       8
```

## Introduction to R

```
df$num_emp
```

```
## [1] 10  5  8
```

```
attach(df)
```

```
num_emp
```

```
## [1] 10  5  8
```

```
detach(df)
```

# Introduction to R

Conditional execution: if statements

```
if (test_expression) {  
  statement  
}
```

```
x <- 5  
if(x > 0){  
print("Positive number")  
}
```

```
## [1] "Positive number"
```

# Introduction to R

Conditional execution: if...else statements

```
if (test_expression) {  
  statement1  
} else {  
  statement2  
}
```

```
x <- -5  
if(x > 0){  
  print("Non-negative number")  
} else {  
  print("Negative number")  
}
```

```
## [1] "Negative number"
```

# Introduction to R

Repetitive execution: for loops, repeat and while

```
for(i in 1:5) {  
  x1 <- i ^ 2  
  print(x1)  
}
```

```
## [1] 1
```

```
## [1] 4
```

```
## [1] 9
```

```
## [1] 16
```

```
## [1] 25
```

# Introduction to R

```
x <- 1
repeat{
  print(x)
  x = x+1
  if (x == 5){
    break
  }
}
```

```
## [1] 1
## [1] 2
## [1] 3
## [1] 4
```

# Introduction to R

```
i <- 1
while (i < 6) {
  print(i)
  i = i+1
}
```

```
## [1] 1
## [1] 2
## [1] 3
## [1] 4
## [1] 5
```

# Introduction to R

- ▶ Writing your own functions. Syntax:

```
func_name <- function (argument) {  
  statement  
}
```

```
# function to print x raised to the power y
```

```
pow <- function(x, y) {  
  result <- x^y  
  print(paste(x, "raised to the power", y, "is", result))  
}
```

```
pow(x = 2, y = 2)
```

```
## [1] "2 raised to the power 2 is 4"
```

# Introduction to R

Plot data: plot() function

```
pres_data = pressure  
head(pres_data)
```

```
##   temperature pressure  
## 1           0  0.0002  
## 2          20  0.0012  
## 3          40  0.0060  
## 4          60  0.0300  
## 5          80  0.0900  
## 6         100  0.2700
```

# Introduction to R

```
plot(pres_data)
```

## Introduction to R

```
# Define the cars vector with 5 values  
cars <- c(1, 3, 6, 4, 9)  
# Graph cars using blue points overlaid by a line  
plot(cars, type="o", col="blue")  
# Create a title with a red, bold/italic font  
title(main="Autos", col.main="red", font.main=4)
```

# Introduction to R

*Autos*

## R Data Import

To read an entire data frame directly, the external file will normally have a special form.

```
HousePrice <- read.table("data.txt")
```

```
HousePrice
```

```
##      V1      V2      V3      V4      V5      V6
## 1 Price Floor Area Rooms Age Cent.heat
## 2 52.00 111.0  830      5 6.2      no
## 3 54.75 128.0  710      5 7.5      no
## 4 57.50 101.0 1000      5 4.2      no
```

```
HousePrice <- read.table("data.txt", header=TRUE)
```

```
HousePrice
```

```
##   Price Floor Area Rooms Age Cent.heat
## 1 52.00   111  830      5 6.2      no
## 2 54.75   128  710      5 7.5      no
## 3 57.50   101 1000      5 4.2      no
```

## R Data Import

```
new_df <- data.frame(HousePrice,  
                     price_one = HousePrice$Price / HousePrice$Rooms)  
new_df
```

```
##   Price Floor Area Rooms Age Cent.heat price_one  
## 1  52.00   111  830     5 6.2         no     10.40  
## 2  54.75   128  710     5 7.5         no     10.95  
## 3  57.50   101 1000     5 4.2         no     11.50
```

```
write.table(new_df, "new_df.txt")
```

## R Data Import

*# csv files*

```
df <- read.csv('file.csv')
```

```
write.csv(df, 'file.csv')
```

*#Rdata files*

```
save(df, file = 'file.Rdata')
```

```
load('file.RData')
```

# R Data Import

- ▶ Import Spreadsheets

```
read_excel(path, sheet = NULL)
```

```
# Specify which sheet to read by position or name.
```

```
excel_sheets(path)
```

```
# Get a vector of sheet names.
```

- ▶ “R Data Import/Export” by R Core Team

<https://cran.r-project.org/doc/manuals/r-release/R-data.pdf>

- ▶ possible to import different data formats and types

## R Data Import (example)

```
library(readxl)
excel_sheets("data.xlsx")
```

```
## [1] "duomenys" "Sheet1" "Sheet2" "Sheet3" "Sheet4"
```

```
data = read_excel("data.xlsx", sheet = "data")
head(data)
```

```
## # A tibble: 6 x 6
```

```
##       id nace          turn_q  hours      vat_q  emp
##   <dbl> <chr>          <dbl> <dbl>      <dbl> <dbl>
## 1     1   grupe_32 245748507 475216 253114282 1024.
## 2     2   grupe_44 99654980 917213 104517461 2028.
## 3     4   grupe_9 86238221 944252 87607361 2216.
## 4     5   grupe_43 67514000 70962 68144446 151.
## 5     6   grupe_43 56587531 272702 58011296 607.
## 6     7   grupe_5 56240816 808947 55653567 2756.
```
