## Support to the reform of the statistics system in Bosnia and Herzegovina

## MISSION REPORT

**Activity 2.A.1:**  
**Component 2: Business Statistics**  
**EU standards for quality reporting**

Mission carried out by  
**Karin Blix, Statistics Denmark**  
**Charlotte Nielsen, Statistics Denmark**

**05-09 November 2018**

Version: Final

| ToR   | Terms of Reference   |

## 1. General comments

This mission report was prepared within the EU Twinning Project "Support to the reform of the statistics system in Bosnia and Herzegovina". It was the first mission to be devoted to quality reporting within Component 2 of the project.

The purposes of the mission:

- Introduction to EU standards on quality of statistics
- Introduction to EU standards for quality reporting and its template
- Discussion on application in BiH
- Specific work on first input to draft quality reports

The consultants would like to express their thanks to all officials and individuals met for the kind support and valuable information which they received during the stay in Bosnia-Herzegovina and which highly facilitated the work of the consultants.

The views and observations stated in this report are those of the consultants and do not necessarily correspond to the views of EU, BHAS, FIS, RSIS, Statistics Denmark.

## 2. Assessment and results

The result for the activity (from the ToR):

- Knowledge gained on EU standards for quality reporting

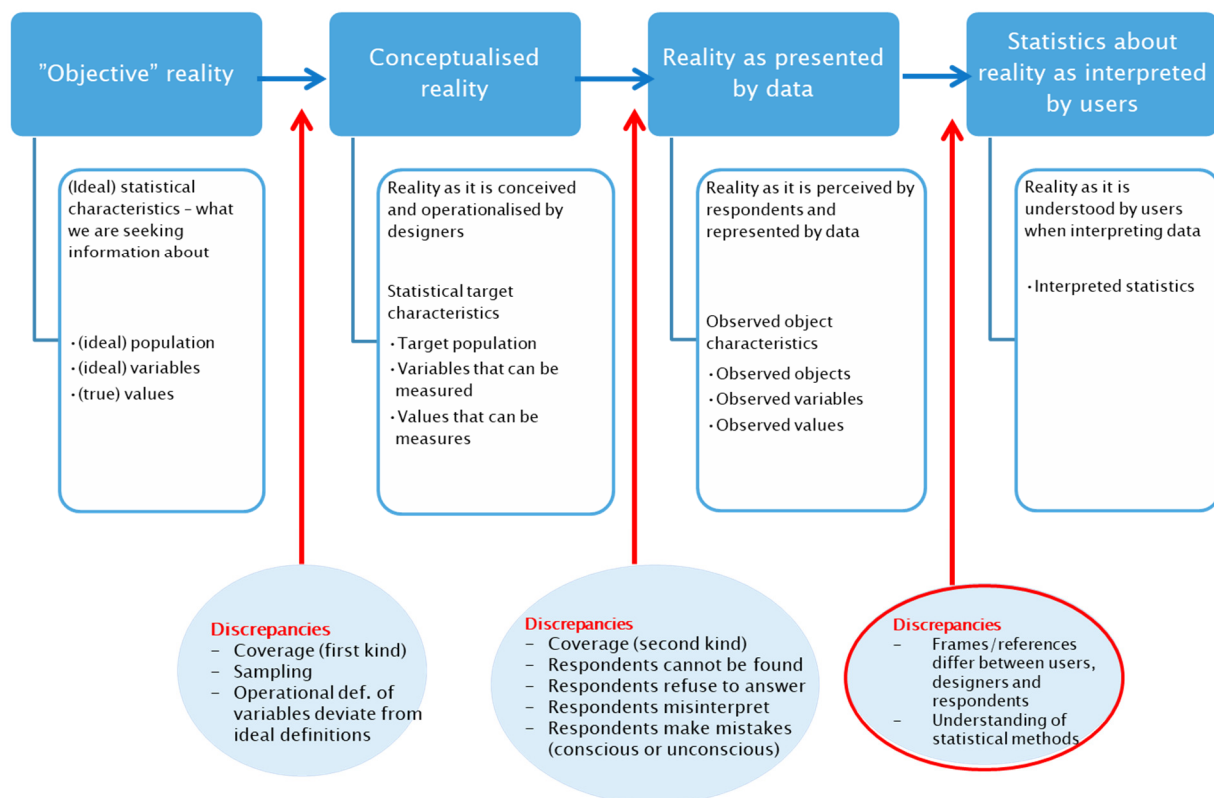

The mission was initiated by Mrs. Ljiljana Okuka giving a presentation on the status for implementing a quality framework of BHAS. The presentation clearly showed that the knowledge within BHAS, RSIS and FIS on EU standards on quality of statistics and quality reporting is already solid and in the process of being implemented. An introduction to the national quality report guidelines and template was given. The national quality reports are common for the three institutions and the guidelines and framework have been developed by the quality working group that consists of a member from each of the three institutions. Training has been given in the guidelines and the national quality reports have been compiled for several statistics. The national quality reports are based on selected fields from SIMS (Single Integrated Metadata Structure) developed in the ESS (European Statistical System).

The consultants presented the European frame for quality and quality reporting. The European frame was compared to other international quality frames to emphasize that the quality frameworks of international organisations are closely linked.

The implementation of the European frame in Statistics Denmark was presented and in particular the implementation of a new system for quality reporting in Statistics Denmark. The overall metadata vision of Statistics Denmark was explained and the implementation of it so far was shown.

Statistics Denmark implemented a new system for quality reports in 2015. This was the first step in the implementation of the overall metadata vision. With the implementation of the new quality reporting system a new tool – the DDI based system Colectica – was implemented and will be the common system for all metadata in Statistics Denmark. One important feature in the new metadata structure is to *write once – use many times*. In order to achieve this it was chosen that for all statistical products published by Statistics Denmark all the fields of SIMS should be completed in the system. When this is done, quality reporting could be completed for national (e.g. at [www.dst.dk](http://www.dst.dk) – the user oriented fields) and international purposes (e.g. the ESS Metadata handler – ESMS or ESQRS). With the implementation of the new system for quality reports in Statistics Denmark a quality assurance function for quality reports was also introduced.

The following model adopted from the Swede Bo Sundgren, to illustrate the production of statistics was introduced to underpin what is needed in quality reports and why it is needed:

Completing quality reports is often seen as an extra burden for statisticians. As quality reports are an essential part of understanding statistics the approach of integrating the work with quality reports in the production process was introduced by going through the processes in GSBPM (Generic Statistical Business Process Model). It was illustrated how approximately 80-90 percent (depending on the statistics) of SIMS can be completed through the three first phases of GSBPM; Specify Needs, Design and Build. The rest of the completion of SIMS can be carried out in the phases; Collect, Process, Analyse and Disseminate. If the completion of a quality report is done following the processes in the production of the statistics, the perceived burden will be less and the quality reports will be completed at the same time as the statistical output is ready for publishing.

Each of the fields in SIMS was discussed and a link with SIMS the dissemination structure used in Statistics Denmark and the quality reporting template developed for the three institutions BHAS, FIS and RSIS was made (Annex 3). This was the basis for the exercise completed on day three by five groups; two groups concentrating on National Accounts, one group concentrating on trade statistics, one on construction statistics and one on forestry statistics and SBS. After the completion each field was discussed with examples from the five groups and experiences from Statistics Denmark.

## Main findings

- The three institutions BHAS, RSIS and FIS are highly committed to quality.
- A working group with one representative from each of the three statistical institutions has been established – this group has developed the guidelines and template for the national quality reports.
- The template and guidelines take outset in SIMS but adjusted to local conditions.
- In general terms the BiH has more focus on producer oriented fields and calculations of Quality Indicators (QI) whereas Statistics Denmark has chosen to focus more on user oriented fields – since user needs is highly prioritized in their strategy.
- A BHAS representative is engaged in Eurostat's Working Group on Quality in Statistics – and has gained solid knowledge on international standards for Quality and Quality reporting.

- Plans for yearly training of staff members in quality reporting are in place and the first training course has been conducted.
- The methodology divisions in all three statistical institutions can provide assistance in calculating QI.
- Several Quality Reports are completed and published on the internet (local language and some also in English).
- A policy for quality management in all three statistical institutions in BiH has been outlined.
- The aim is to publish quality reports for all statistical products published.
- Quality reports will be updated on an annually basis.
- The National Account Department of BHAS express a need for microdata from the entities to be able to provide comprehensive quality reports fully meeting the EU Standards for quality reporting.
- The consultants suggested that all statistical products in the three institutions provide quality reports for every statistical product together with data.

### 3. Conclusions and recommendations

- As important experience has been achieved when introducing guidelines and template for national quality reports, it is recommended to use the knowledge collected to adjust the quality report guidelines and template.
- As both external and internal users need quality reports to fully understand the statistical outputs, it is recommended to have both external and internal users in mind if and when the template for national quality reports are updated.
- In order to ensure that the user's needs are met it is recommended to establish domain specific user groups or similar to meet at a regular basis e.g. once or twice a year.
- As users are in need of both reference and structural metadata it is recommended to consider whether quality reports can be connected or integrated with other metadata.
- In order to be able to reuse metadata it is recommended to investigate the possibility of implementing an IT platform that can support this e.g. DDI or similar.
- As the statistical output cannot be fully understood without the proper metadata it is recommended to publish quality reports at the same time as the data are published.
- In order to ease the task of completing quality reports at the same time as the statistical output, it is recommended to encourage integrating the work with quality reports in the production process.
- To ensure consistency and accessible for quality reports, it is recommended to introduce a quality assurance process. This could be done by a dedicated quality team/unit or by colleagues from another unit.
- For S.3.1- Data description it is suggested to consider including description of content, variables and key figures that the users can expect to find in the statistics in addition to purpose in the template for the national quality reports.
- For S.3.6 - Statistical population is not included in the template for the national quality report. As this is the target of the statistical product it is suggested to include this.
- The two fields S13.3.4 – Processing errors and S13.3.5 Model assumption errors are not a part of the template for the national quality reports. To be able to give a complete picture of Non-sampling errors it is suggested to include the two in the template.
- To ensure the successful implementation of user friendly quality reports it is recommended that the management support and engage in the process.

## **Annex 1. Terms of Reference**

### **Terms of Reference**

#### **EU Twinning Project BA 15 IPA ST 01 17**

#### **Component 2: Business Statistics 05-09 November 2018**

##### **Activity 2.A.1: EU standards for quality reporting**

##### **1. Result for the activity**

- Knowledge gained on EU standards for quality reporting

##### **2. Purpose of the activity**

- Introduction to EU standards on quality of statistics
- Introduction to EU standards for quality reporting and its template
- Discussion on application in BiH
- Specific work on first input to a draft quality report on SBS

##### **3. Expected output of the activity**

- Knowledge on EU standards of quality and quality reporting gained
- Procedure for filling in quality reports defined
- Participants comfortable with the EU template of quality report
- First input to a draft quality report on SBS

##### **4. Participants**

Agency for Statistics of BiH (BHAS)

- Ljiljana Okuka, Methodology, standards, planning, quality and coordination, Senior advisor
- Anita Brković, Industry and Construction Statistics, Senior Officer
- Dženita Babić, Industry and Construction Statistics, Senior Adviser
- Tanja Miović, Industry and Construction Statistics, Senior Officer
- Azra Bander Demirović, Trade and Services Statistics, Junior Associate
- Ivana Tavra Čolo, Department for Business statistics, Senior official
- Dženita Mustafić, Department for Business statistics, Specialist
- Dijana Mlikota, Macroeconomic statistics, Assistant Director
- Edina Kozić, National Accounts Department, Head of Department
- Srđan Vitković, National Accounts Department, Senior Statistician
- Rade Čolaković, National Accounts Department, Senior Officer
- Vanja Erak, National Accounts Department, Junior officer
- Lana Šimić, National Accounts Department, Senior Officer
- Aida Mehić, National Accounts Department, Senior Advisor

- Brana Taraba, National Accounts Department, Senior Advisor
- Amra Ibrahimagić, Department for development of social statistics, Senior Advisor
- Jasna Samardžić, International Cooperation and EI Department, Head of Department

#### Institute for Statistics of Federation of BiH (FIS)

- Nermina Ibrišević-Ademović, Head of Department
- Danijela Bujak-Buzuk, Senior Adviser for National Accounts
- Amer Koric, Assistant Director for IT sector and statistical methods
- Edina Mehidić, Junior associate for sampling and statistical analysis
- Alma Čolpa, Advisor for SBS
- Enisa Rastić, Head of SBR and Economic Classifications Department
- Ademira Velićanin, Senior Advisor for internal trade statistics
- Emina Šabanadžović, Senior advisor for labour cost and earning statistics

#### Institute for Statistics of Republika Srpska (RSIS)

- Danijela Savanović Veber, Senior Statistician for Agriculture, Fishery and Forestry Statistics
- Aleksandra Đonlaga, Senior Statistician for Service Statistics
- Radmila Lazendić, Statistician for Service Statistics
- Želimir Radišić, Senior Statistician for Construction and Housing

#### **MS Experts**

- Karin Blix, Statistics Denmark
- Charlotte Nielsen, Statistics Denmark

#### **Twinning Project Administration**

- Katja Møller Hjelvang, RTA
- Đemka Šahinpašić, RTA Assistant
- Svjetlana Pavičić, Interpreter
